

Experiment No.3

Name: Shivanshu Anant Suryakar

PRN: 1841048

Class: LY Computer Engineering

Batch: L3

Aim: Write a program for web feed using PHP and HTML

Theory:

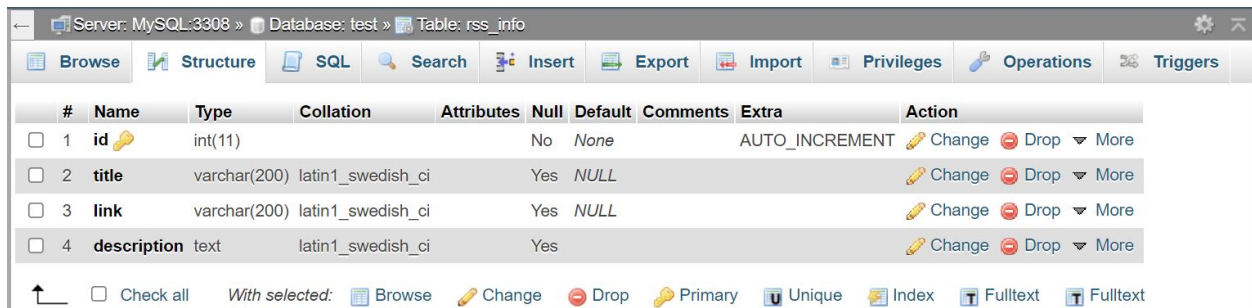

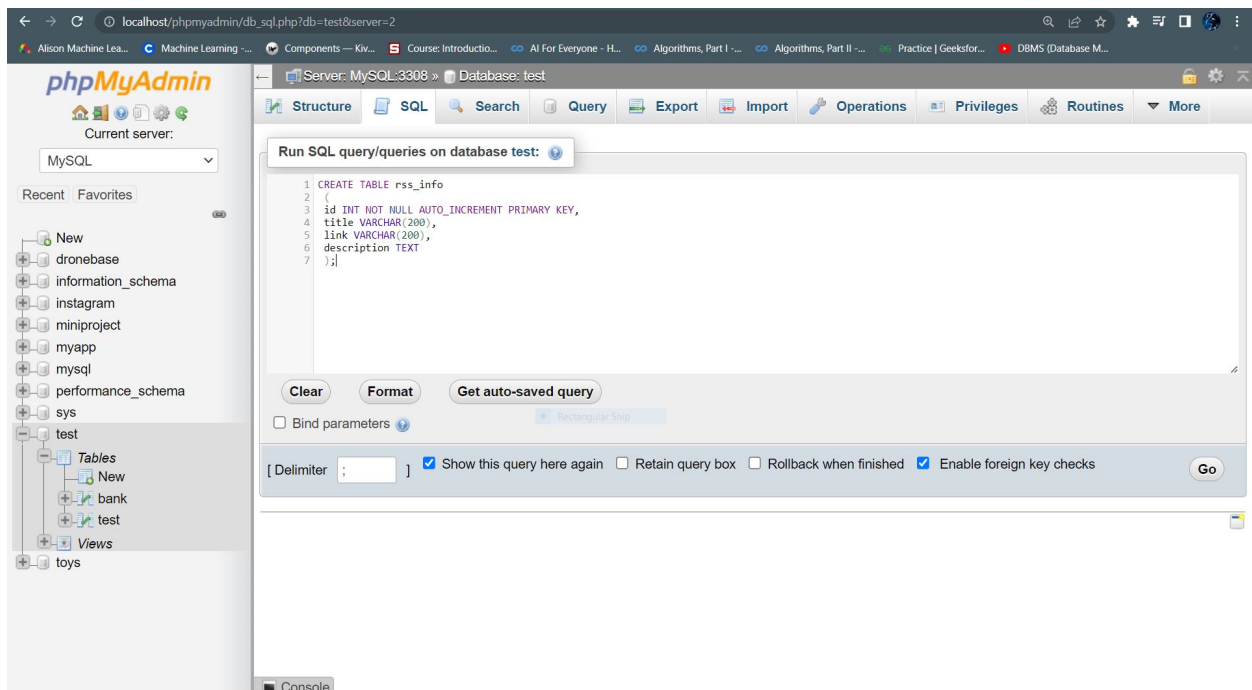

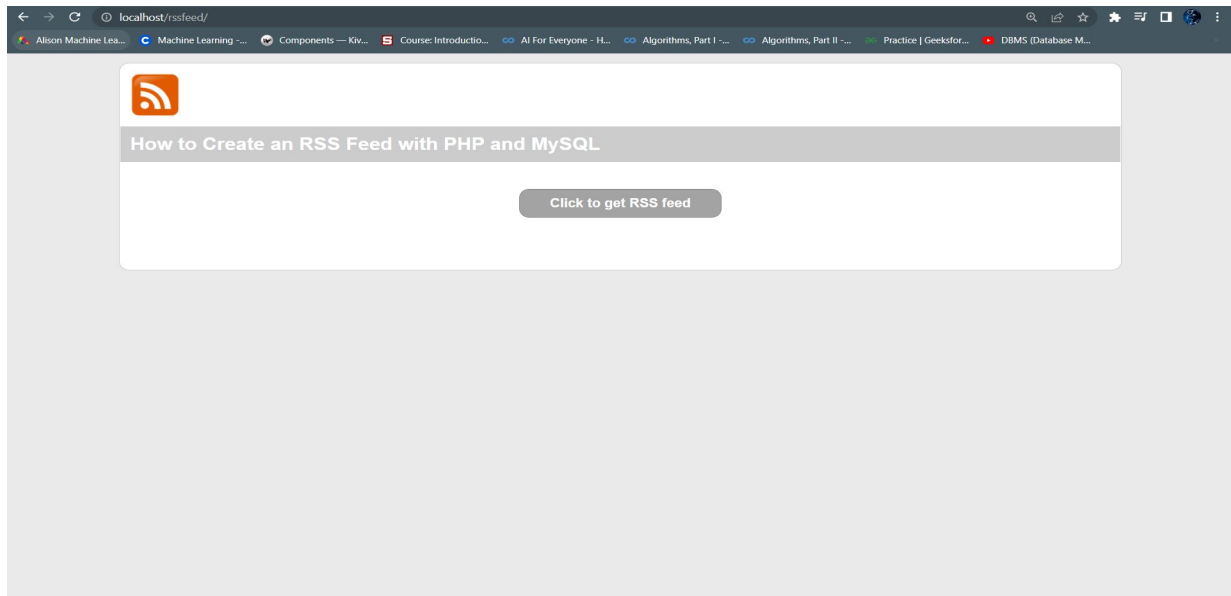

RSS is a way for website authors to publish notifications of new content on their website. This content may include newscasts, blog posts, weather reports, and podcasts.

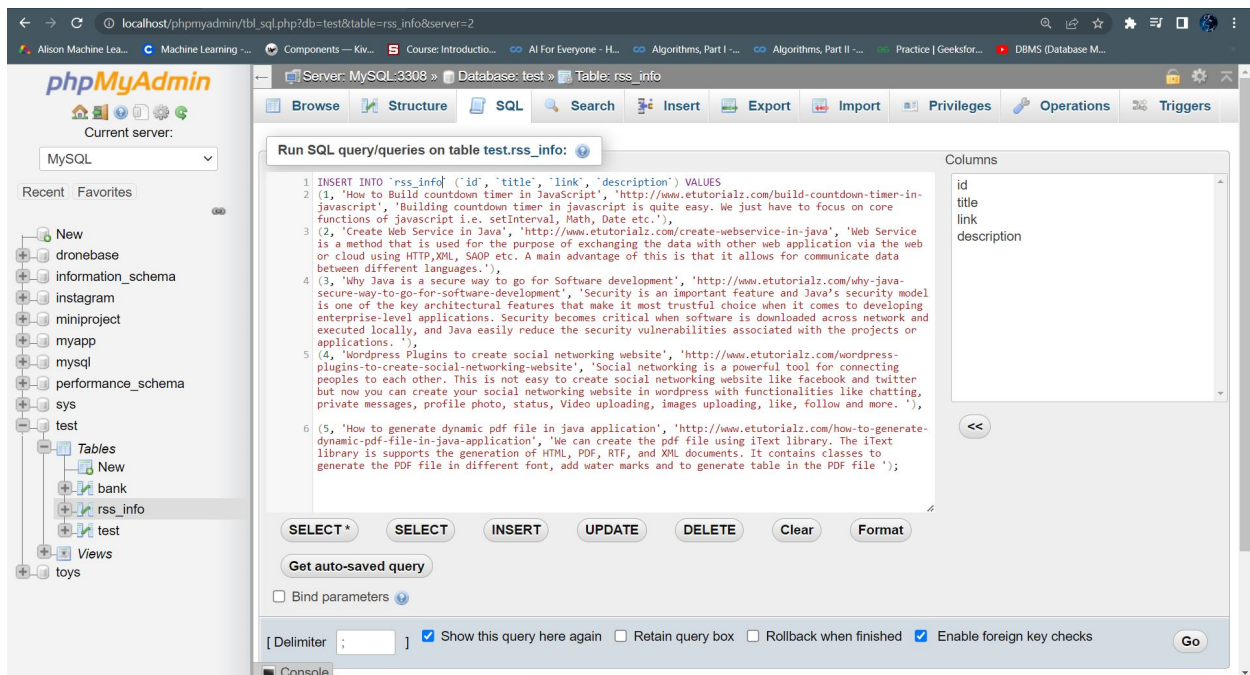

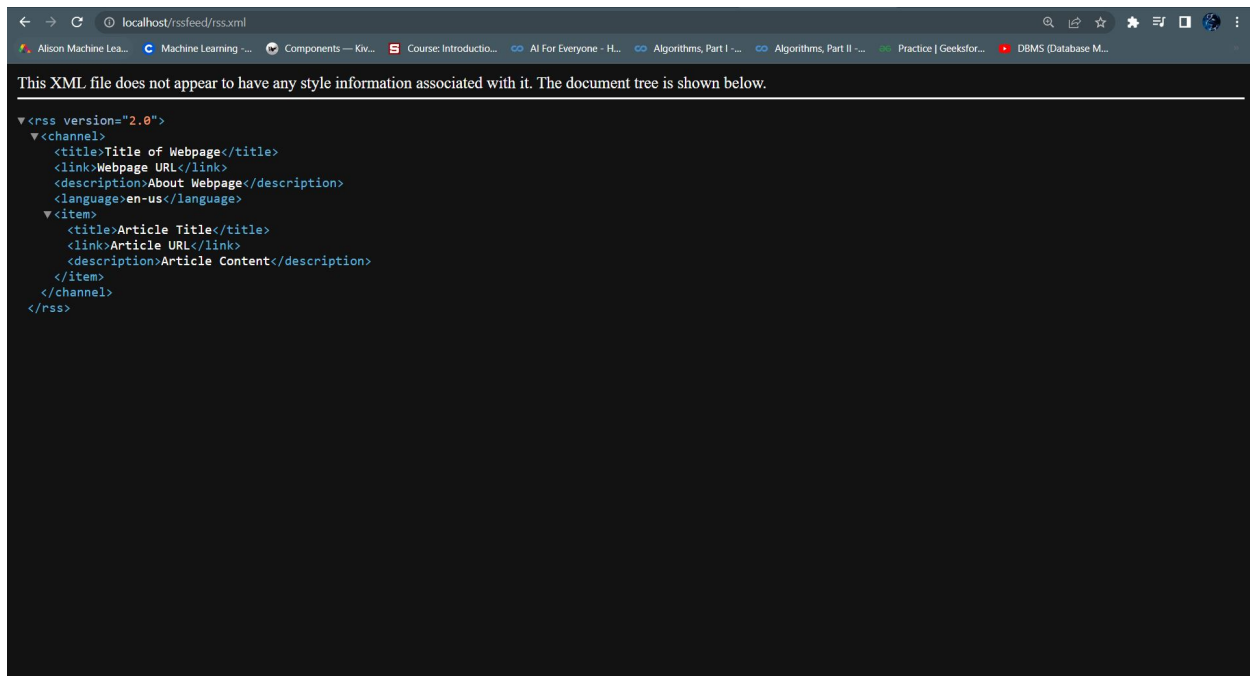

To publish these notifications, the website author creates a text file with the XML file extension for the RSS feed that contains the title, description, and link for each post on the site. Then, the website author uses this XML file to add an RSS feed to web pages on the site. The XML file automatically syndicates new content through this RSS feed in a standard format that displays in any RSS reader.

An RSS feed consolidates information sources in one place and provides updates when a site adds new content. With social media, all you see is the favorite stuff that people share. With an RSS feed, you see everything a website publishes.

To find an RSS feed on a website, look on the site's main or home page. Some sites display their RSS feed as an orange button that may contain the acronyms RSS or XML.

Below are some of the screenshots of the web feed using PHP and HTML:

RSS Feed has been rendered

<https://www.w3schools.in/> Cloud RSS en-us <http://www.etutorialz.com/how-to-generate-dynamic-pdf-file-in-java-application> We can create the pdf file using iText library. The iText library is supports the generation of HTML, PDF, RTF, and XML documents. It contains classes to generate the PDF file in different font, add water marks and to generate table in the PDF file <http://www.etutorialz.com/wordpress-plugins-to-create-social-networking-website> Social networking is a powerful tool for connecting peoples to each other. This is not easy to create social networking website like facebook and twitter but now you can create your social networking website in wordpress with functionalities like chatting, private messages, profile photo, status, Video uploading, images uploading, like, follow and more. <http://www.etutorialz.com/why-java-secure-way-to-go-for-software-development> Security is an important feature and Java's security model is one of the key architectural features that make it most trustful choice when it comes to developing enterprise-level applications. Security becomes critical when software is downloaded across network and executed locally, and Java easily reduce the security vulnerabilities associated with the projects or applications. <http://www.etutorialz.com/create-webservice-in-java> Web Service is a method that is used for the purpose of exchanging the data with other web application via the web or cloud using HTTP:XML, SOAP etc. A main advantage of this is that it allows for communicate data between different languages. <http://www.etutorialz.com/build-countdown-timer-in-javascript> Building countdown timer in javascript is quite easy. We just have to focus on core functions of javascript i.e. setInterval, Math, Date etc.

Index.php:

```
<meta http-equiv="Content-Type" content="text/html; charset=utf-8">
```

```
<title>How to Create an RSS Feed with PHP and MySQL</title>
```

```
<link rel="stylesheet" href="css/style.css">
```

```
<div class="container">
```

```
    <div class="header">
```

```
        
```

```
    </div><!-- header -->
```

```
<h1 class="main_title">How to Create an RSS Feed with PHP and MySQL</h1>
```

```
<div class="content">
```

```
    <a href="rss" class="button_rss">Click to get RSS feed</a>
```

```
</div><!-- content -->

<!-- footer -->

</div><!-- container -->
```

RSS.php

```
<?php

$con=mysqli_connect("localhost","root","","test",3308);

if (mysqli_connect_errno($con)) {

echo "Database connection failed!: " . mysqli_connect_error();

}

else

echo "<h4>RSS Feed has been rendered</h4>";

$sql = "SELECT * FROM rss_info ORDER BY id DESC LIMIT 20";

$query = mysqli_query($con,$sql);

//header( "Content-type: text/xml");

echo "<?xml version='1.0' encoding='UTF-8'?>

<rss version='2.0'>

<channel>

<title>w3schools.in | RSS</title>

<link>https://www.w3schools.in/</link>

<description>Cloud RSS</description>

<language>en-us</language>";

while($row = mysqli_fetch_array($query)){

$title=$row["title"];
```

```
$link=$row["link"];
$description=$row["description"];
echo "<item>
<title>$title</title>
<link>$link</link>
<description>$description</description>
</item>";
}
echo "</channel></rss>";
?>
```

Conclusion:

In the given practical we have performed the practical for web feed using PHP and HTML.
